

Since 1958, Oil Center Research, LLC has supplied over 1,000 products to various industries worldwide. Valve Guardian, a new line from Oil Center Research, LLC, was created to simplify choices for OEM and valve maintenance companies by offering a comprehensive product line designed specifically for the diverse needs of the valve industry. Valve Guardian products extend the life of your investment by providing superior protection through research and innovation.

Most recently Valve Guardian introduced FracJack, an industry first, designed exclusively for protection against frac operations that involve multi-stage greasing and abusive pumping applications. FracJack products are engineered to withstand the pressures and temperatures that frac valves endure. Customers include valve manufacturers, valve maintenance companies, rebuild shops, and frac operations.
